

RIBuild

RIBuild seminar: Internal insulation of older buildings

21 January 2016 RIBuild invites you to the first open afternoon seminar about risks and potentials of internal insulation of older buildings.

Get introduced to the RIBuild project, which develops research-based guidelines for robust internal insulation of historic buildings across Europe. Learn about risks and potentials of internal insulation. Hear about the experiences from two renovation case studies. You also get the opportunity to give your input on the coming guidelines.

The seminar is held in Copenhagen, Denmark. It will also be live-streamed and video-recorded. Please register if you would like to attend the seminar or follow the seminar online.

Programme and registration

Older buildings are often retrofitted with Internal insulation to maintain the external appearance, but this can create problems such as moisture damage. RIBuild investigates how to install internal insulation in a secure way. Photo: Sirid Bonderup.
