

RIBuild

Presentations and videos from RIBuild seminar

The first open RIBuild seminar focused on the need for energy optimization of historic buildings in Europe while preserving the architecture and cultural heritage.

The presenters went over the challenges and risks of internal thermal insulation compared to external insulation and shared practical experience from renovation processes.

The preliminary thoughts behind the guidelines, which RIBuild is developing for effective internal insulation, were presented and discussed with the participants.

At the seminar 21 January 2016 presenters discussed the guidelines for internal thermal insulation, which RIBuild develops over the next four years. The guidelines will be applicable to buildings across Europe. Photo: Greg McQueen
